### Skills

- ▶ HTML/CSS
- ▶ PHP/MySQL
- ▶ Javascript(including jQuery, Mootool and YUI)
- ▶ OOP
- ▶ LESS
- ▶ Backbone
- ▶ Slim
- ▶ Node.js
- ▶ XML/XSLT
- ▶ Actionscript 2 and 3
- ▶ JSON
- ▶ file repositories(SVN, Git, Alienbrain)

### Experience

#### **Web Developer** (April 2013 – July 2013)

Dot2Dot Communications (Toronto)

The web development role was a joint front end and back end set of tasks. I used visual basic references with Slim Framework based php to create an api for pulling data from a .net backend. The front end of the project involved Backbone framework based javascript with Require.js to load and display elements and scripts on demand. Project styling was performed using less at runtime.

**Senior Web Developer** (June 2010 – April 2013)

Direct Antidote (Toronto)

I provide front end to back end development work for html and flash projects. My primary focus is the collection of form data and usage statistics. To achieve this aim I make use of php/mysql, html, css, and jquery. My tasks begin with pre-client checks on concepts to ensure they can be built within time scope and technical guidelines. Between projects I work to incorporate technologies such as svn, wiki pages, and template solutions to ensure the speedy production of future projects.

**UI Developer – Contract** (June 2009 – May 2010)

CBC (Toronto)

At the CBC, my tasks involved a variety of technologies. My first project involved the creation of dynamic html pages for blogs and regional weather. This was followed by the redevelopment of php sites to follow server guidelines, and the upkeep of existing pages across the news site. These tasks later grew to involve XSLT data feeds and implementing organization standards in PHP based projects.

**Flash Developer** (November 2008 – June 2009)

Publicis (Toronto)

My role at Publicis involved a combination of maintenance of existing flash as2 projects, as well as the development of new sites for clients such as Rogers, CIBC, and Purina. The new developments typically included 3D flash content and XML controlled modular flash video. All sites involved high levels of server side integration either through user uploaded content or usage tracking.

**Digital Architect** (March 2007 – October 2008)

Dashboard (Toronto)

At Dashboard my projects consisted primarily of flash experience sites for the Unilever family of products. Working closely with server side developers, I helped build sites that provided interactive content and retained preferences such as online gardens and recipe guides. My projects also included game development and papervision 3d projects.

**Flash Developer** (October 2004 – February 2007)

Ganz (Toronto)

My role at Ganz began with debugging senior developers games. Over time my role grew to include the development of electroserver multiplayer game modules, database driven trivia games, and furniture functionality. Performing game builds often involved trig and physics based math(as needed by the project).

## Education

### Digital Media Technical Production - Honours Diploma (2001)

- ▶ Seneca@York

### Geography – BA Hon. (2000)

- ▶ York University

## Continuing Education

### Focus Android (2012)

- ▶ FITC

### Focus Javascript (2012)

- ▶ FITC

### Android Development – Zero to Hero (2011)

- ▶ Rich Media Institute

### iPhone Development (2010)

- ▶ Refresh Events
